

Bug Report: Unintended "Upgrade to View Details" Button Rendered in Metadata Section

Bug ID: UI-LAYOUT-001

Severity: Medium (UI Overlay & Contextual Defect)

Priority: P3

Status: Open

Issue Summary

The "Upgrade to View Details" CTA button is incorrectly displayed within the user profile metadata section. The button overlaps existing profile information (...e • 5'6") and provides an irrelevant call-to-action in a section where this prompt is not required.

Steps to Reproduce

1. Log into the application and navigate to the profile section.
2. Locate the user metadata header showing physical/demographic details (e.g., height, age).
3. Observe the overlay and placement of the "Upgrade to View Details" button.

Expected Result

- Profile metadata should render clearly without overlapping elements.
- The "Upgrade to View Details" button should not appear in this section, as the detail prompt is unnecessary for this context.

Actual Result

- The "Upgrade to View Details" button is rendered directly over the section text line.
- Text content (...e • 5'6") is partially obscured by the button container.

Evidence & Visual Proof

Evidence Field	Details
Attachment	image_47197c.png
Defect Type	Element Overlap / Redundant UI Component

Evidence Field	Details
Observed Behavior	The rounded CTA button floats over active text, obstructing basic metadata.
Contextual Flaw	The upgrade prompt is redundant and out of scope for this specific UI block.

Suggested Fix

Remove the "Upgrade to View Details" component from this section's template, or correct the conditional logic so the CTA only appears where access restrictions actually apply.
